

## EPCOS Product Brief 2018

# Power Quality Solutions

### Static Var Generator (SVG) PQvar Series

EPCOS has been offering a comprehensive range of key components for Power Factor Correction (PFC) and Power Quality Solutions (PQS) for many years.

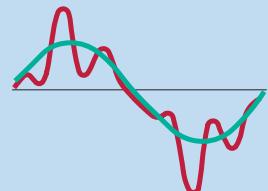

The rapid development of industry and infrastructure resulted in the increased usage of power electronic loads which demands a highly dynamic response time for reactive power compensation. Conventional reactive power compensation only with passive components cannot fully meet these conditions, especially when the reactive power requirement is rapidly changing. EPCOS Static Var Generator (SVG) PQvar Series utilizes three levels inverter topology to provide real time response to reactive power requirements.

#### Static Var Generator (SVG) PQvar™ Series

- New approach to power factor correction and load balancing
- Fast response time < 15 ms, with dynamic reaction time less than 50 µs
- Precise compensation after compensating the target power factor can reach a value of unity
- Capable of both inductive and capacitive compensation and will avoid under and over compensation issues
- Minimal loss, better energy efficiency, long-term safe and reliable operation
- Modular design, compact structure, small footprint, simple operation, easy maintenance

# PQS

# Static Var Generator (SVG) PQvar Series

EPCOS Static Var Generator (SVG) PQvar Series is a Flexible AC Transmission Systems (FACTS) controller, whose capacitive or inductive output current can be controlled independent of the AC system voltage.

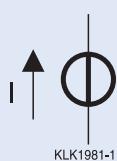

SVG PQvar Series is a parallel device connected to the grid and the main circuit is based on a three phase voltage source converter (VSI) topology. External CT measures load current and external DSP helps to calculate and analyze the required reactive current.

SVG PQvar Series controls PWM signals and sends control message to IGBT modules which generate reactive current in order to improve system power factor.

SVG PQvar Series provides faster compensation compared to conventional compensation systems such as capacitor banks. Thus, it is an ideal solution especially for fast loads of inductive or capacitive behavior. It can compensate both inductive and capacitive reactive current without under or over compensation.

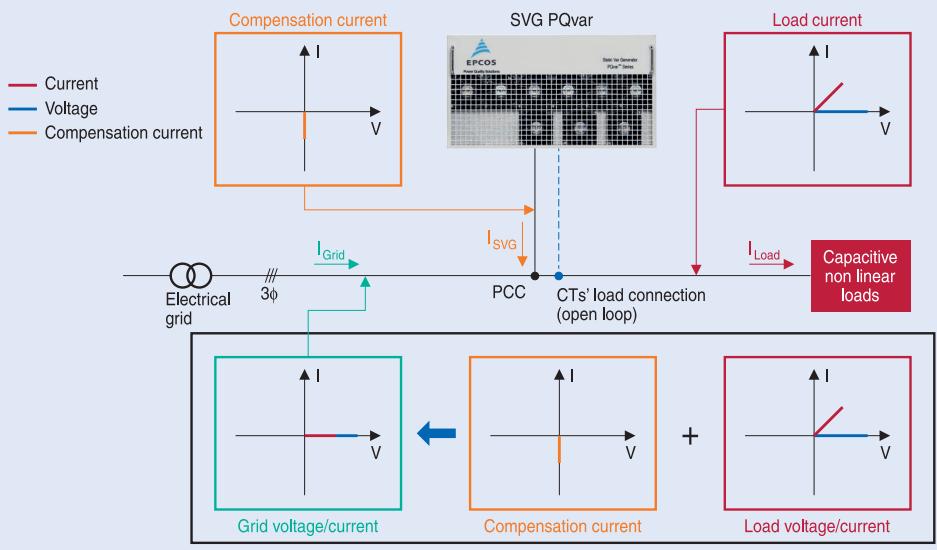

## Static Var Generator (SVG) PQvar Series

### Operating principle of SVG PQvar Series

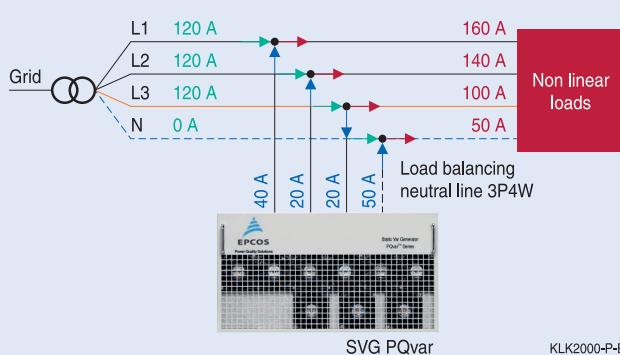

SVG PQvar Series generates a compensation current working as a dynamic current source, monitors the power factor value of power system, and generates real time compensation current in order to ensure to achieve the set target  $\cos \varphi$ .

### Compensation of reactive power with SVG PQvar Series

KLK1986-7-E

### SVG PQvar Series load balancing for 3P3W and 3P4W

KLK2000-P-E

SVG PQvar Series can balance load between phases and unloaded neutral wire for input voltage connection systems such as three phase three wires (3P3W) and three phase four wires (3P4W). Therefore, it will be a perfect solution with applications having reactive power requirements along with unbalanced loads, which is the case with the electricity distribution in rural areas, some industrial applications and much more.

# Static Var Generator (SVG) PQvar Series

## General information

SVG PQvar Series is a new product which has rewritten the conventional approach of power factor correction. It is designed to compensate the rapid reactive power requirement, thereby improving the power factor and consequently reducing the costs. SVG PQvar Series monitors the current signal and utilizes three levels inverter topology which generate the reactive part of the measured current to compensate dynamically in order to improve the power factor. It can dynamically compensate power factor from -1 to 1.

## Features

- SVG PQvar Series can be considered as a controllable reactive current source, which helps to improve the system power factor to a target value of more than  $> 0.99$  without any over or under compensation.
- SVG PQvar Series has extremely rapid dynamic compensation reaction time, which is less than  $50 \mu\text{s}$  and a state response time of less than 15 ms.
- SVG PQvar Series is an active compensation device, which doesn't need capacitor or reactor for reactive power compensation which will avoid the condition of resonance caused by the traditional capacitor banks.
- SVG PQvar Series can compensate both inductive and capacitive reactive power and also provide load balancing.
- SVG PQvar Series can compensate reactive power in any scope and can be installed together with traditional capacitor banks.
- The grid voltage has no influence on the SVG PQvar Series compensation capacity. So even if the system voltage drops down, the required reactive power can be compensated by monitoring its requirement.
- SVG PQvar Series can compensate for the same capacity equivalent to the installed capacity, therefore it requires 20 to 30% lower capacity in comparison with the conventional capacitor banks.
- SVG PQvar Series has been designed to provide highest safety and reliability features.

## Typical applications

Some typical applications which require rapid reactive power compensation includes the following:

- Data centers
- UPS systems
- Renewable power generation (e.g. photovoltaics and wind turbines)
- Sensitive equipment manufacturing (e.g. silicon wafer production, semiconductor production)
- Industrial production machines
- Electrical welding systems
- Plastic industry machinery (e.g. extruders, injection molders)

## Safety features

- Overload protection
- Internal short-circuit protection
- Overheating protection
- Overvoltage and undervoltage protection
- Inverter bridge protection
- Fan fault alarm

# Low-Voltage Static Var Generator (SVG) PQvar LV-Series

Depending on the customer needs, EPCOS offers either complete panels, wall mounted cabinets or even modules. The state of the art modular design of SVG PQvar Series offers the advantage of having a minimum downtime in case of a service or maintenance requirement.

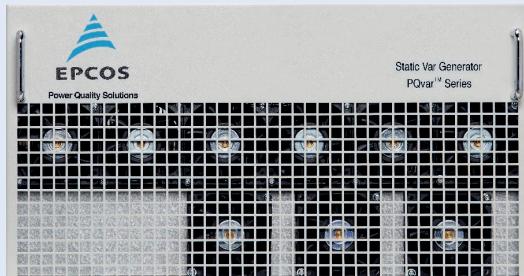

**SVG PQvar Series wall-mounted**

**SVG PQvar Series floor-mounted**

**PQvar module**

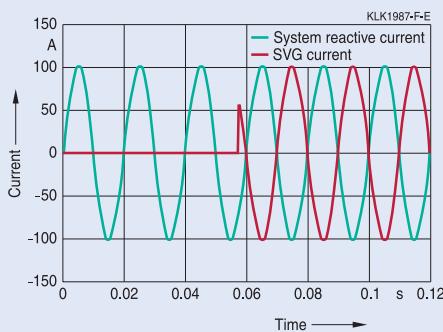

# Low-Voltage Static Var Generator (SVG) PQvar LV-Series

## SVG PQvar Series compensation performance

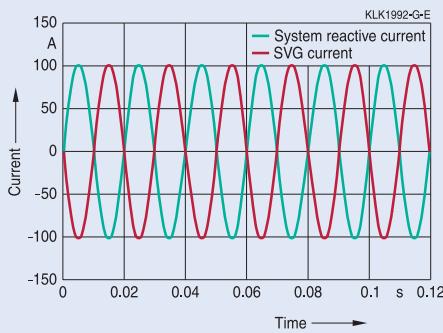

### Fast reaction

Extremely rapid reactive power generation, in order to achieve target PF, right at the SVG PQvar Series switch on.

### Perfect compensation

SVG PQvar Series identifies the system reactive power requirement and generates a reactive current same in magnitude but opposite in phase to ensure perfect compensation result.

### High performance

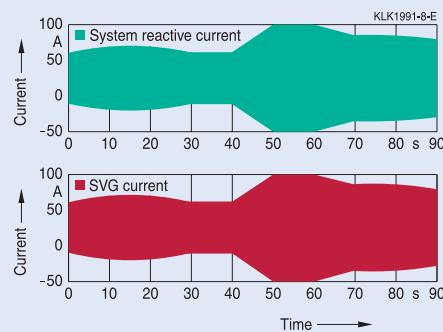

- Reactive power compensation up to  $\cos \varphi = 0.99$
- Load balancing between phases
- Fully inductive and capacitive current compensation from 0 to 100%

### Fast compensation response

- Compensation in real-time with steady state response time less than 15 ms
- Immediate load change of reaction time less than 50  $\mu$ s
- Accurate power factor correction, no over-compensation and under-compensation, no system harmonic resonance
- Capacity will not be affected in case of system voltage drop, output will be equal to rated capacity

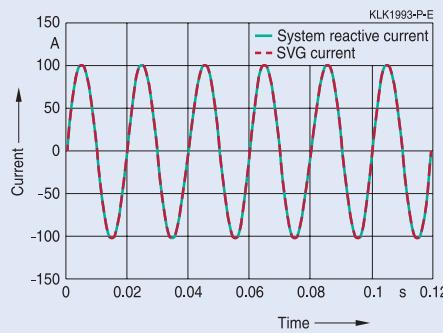

### Real-time tracking

While system reactive current changes, SVG PQvar Series also can generate dynamic real time compensation current to satisfy the changing power system requirement.

### Reverse and overlapping

The reversed waveform of reactive current generated by SVG PQvar Series overlaps with the power system reactive current.

### Modular design

SVG PQvar Series modular design is based on concept of components, the application just like traditional power factor compensation mode.

- Maximum rated capacity of one single module is 200 kvar
- Customizable cabinet and maximum output capacity of a cabinet is 800 kvar
- Easily to operate, maintain and transport

### Different combinations

- SVG PQvar Series
- SVG PQvar Series with capacitor banks
- SVG PQvar Series with AHF (reactive power and harmonic compensation)

Compensation performance	
Target PF	-1 ... +1
Reactive power compensation rate	> 99% (target PF is 1)
Response time	< 15 ms
Reaction time	< 50 µs
Capacitor switching performance	
Compensation method	Three-phase/ split/ mixed compensation
Capacitance coding method	Optional
Capacitor switching method	Stack/ normal/ cycle/ individual
Switching manner	Auto/ manual
External ports	
RS485 port 1	Communication with SVG modules
RS485 port 2	External communication port
Network port	External communication port
USB port	Code upgrading port
Temperature detection	Measuring system's operating temperature or ambient temperature
Fan controlling dry contact	Controlling SVC cooling fan
Alarm indicator dry contact	For reserved external alarm indicator
Control output contact	Control outputs, up to 18 at most Contact support: 120 V AC / 10 A, 220 V AC / 8 A, 400 V AC / 3 A, 110 V DC / 0.2 A, 60 V DC / 0.6 A, 24 V DC / 5 A Level signal: 12 V DC / 30 mA
Reserved dry contact	One input / one output
Communication protocol	Modbus
Protection functions	Undervoltage, overvoltage, underfrequency, overfrequency, phase failure, high harmonic voltage, SVG overload, SVG overtemperature
Display	7" touch screen
Installation requirements	
Power consumption	< 25 W
Protection class	IP41 for the front panel, and IP20 for the rear panel
Operating environment	
Operating temperature	-20 ... +60 °C
Altitude	≤ 2500 m
Humidity	≤ 95%
Storage temperature	-40 ... +70 °C
CT ratio	150/5 ... 10000/5

# Hybrid PFC-Solution – SVG PQvar and Classic PFC Managed by Advanced Multi Controller (AMC)

SVG PQvar Series AMC (Advanced Multi Controller)	
Product description	Ordering code
Advanced Multi Controller (AMC) unit – HMI colour display 7" for switching thyristors	B44066F9989V230
Advanced Multi Controller (AMC) unit – HMI colour display 7" for switching contactors	B44066F9988V230

Component selection table for de-tuned PFC (classic)						
De-tuning factor %	Effect. filter output kvar	Capacitor quantity and ordering code	Reactor <sup>1)</sup> ordering code	Contactor ordering code	Cable <sup>2)</sup> cross section mm <sup>2</sup>	Fuse <sup>2)</sup> rating A

<sup>1)</sup> EPCOS offers reactors with slightly different specifications (e.g. dimensions) that can be used for the same application although sometimes with slightly different resulting performances. These types are distinguished by different letters at digit 12 of the product code.

<sup>2)</sup> The above mentioned values are guidelines for operation in normal conditions at ambient temperatures up to +35 °C. Various parameters such as temperature inside the cabinet, cable quality, maximum cable insulation temperature, single or multi core cable, cable length and laying system have to be considered for a proper selection. Upgrade/ downgrade accordingly if conditions differ. Additionally, do not forget to consider the regulations and standards which are valid for your country.

<sup>3)</sup> In some cases special interconnection of the single-phase capacitors needed; in case you are not familiar please contact our sales office for further details.

## SVG PQvar Series Advanced Multi Controller (AMC) unit

# Medium-Voltage Static Var Generator (SVG) PQvar MV-Series

Technical data and specifications of medium voltage SVG PQvar MV-series			
Rated voltage <sup>1)</sup>	6 × (1 ±20%) kV	10 × (1 ±20%) kV	35 × (1 ± 20%) kV
Mains frequency	50 Hz (±2 Hz) / 60 Hz (±2 Hz) (not adaptive)		
Parallel operation	It is available to meet the demand of larger capacity		
Overall efficiency	> 99.2% (excluding transformer)		
Power grid structure	Three-phase, three-wire (3P3W)		
Circuit topology	2 level H-bridge series		
Single-module capacity (Mvar)	2, 3, 4, 5, 6, 7	2, 3, 4, 5, 6, 7, 8, 9, 10, 12	2, 3, 4, 5, 6, 7, 8, 9, 10, 12
Full response time	< 5 ms (10 ... 90%)		
Target power factor	Meet design requirements within capacity range		
Active power loss	< 0.8% rated power		
Mounting	Cabinet		
Cooling mode	Air cooling		
Communication interface / protocol	RS485 or Ethernet / Modbus TCP/IP or RTU		
Noise level	< 70 dB (A)		
Operation mode	Constant power factor, constant reactive and constant voltage control are optional		
Operation display	Operation parameter setting, touch key-press operation, multiple parameter display, operation data recording, fault recording and broadcasting, parameter and record data backup, remote control and parameter downloading, remote update of controller software		
Display accuracy	±2% FS		
Expansion capability	Parallel operation is available to meet the demand of larger capacity		
Protection functions	Overvoltage, undervoltage, fault-phase and default phase of power grid, equipment overcurrent, overvoltage of DC busbar, automatic current limiting protection in case of overload, overcurrent protection of power module, control power supply anomaly protection, communication fault protection, controller anomaly protection, control system power-off protection		
Operating temperature	−10 ... +45 °C, other temperature ranges upon request		
Storage temperature	−20 ... +65 °C		
Relative humidity	< 90% (when the temperature is +25 °C)		
Protection class	IP20		
Panel color	RAL7035 light grey		
Altitude	< 2500 m		
General safety requirements for SVG use and operation	EN ISO 13849-1		
SVG EMC requirements	IEC 61000-4-5:2005		

<sup>1)</sup> Other voltages upon request

# Medium-Voltage Static Var Generator (SVG) PQvar MV-Series

6 kV SVG PQvar Series – 3P3W systems						
Type	Rated module reactive power kvar	Voltage class kV	Mounting variant	Approx. weight kg	Approx. dimensions (W × D × H) mm	Ordering code

<sup>1)</sup> Transformer must be used additionally (35/6 kV or 35/10 kV)

<sup>2)</sup> Dimensions are only for SVG modules without transformers

# Medium-Voltage Static Var Generator (SVG) PQvar MV-Series

**E.g. B44066F6050X061**

Code for SVG PQvar series MV

Connection: 6 for 3-wire (3P3W)

Module: 20 for 2000 kvar/ 35 for 3500 kvar/ ...

Version number

1 for panel/ 2 for container

Rated voltage: e.g. 6 for 6 kV/ 10 for 10 kV/ 35 for 35 kV

## Display of ordering codes for EPCOS products

The ordering code for one and the same product can be represented differently in data sheets, data books, other publications and the website of EPCOS, or in order-related documents such as shipping notes, order confirmations and product labels. The varying representations of the ordering codes are due to different processes employed and do not affect the specifications of the respective products. Detailed information can be found on the Internet under [www.epcos.com/orderingcodes](http://www.epcos.com/orderingcodes).

**Important information:** Some parts of this publication contain statements about the suitability of our products for certain areas of application. These statements are based on our knowledge of typical requirements that are often placed on our products. We expressly point out that these statements cannot be regarded as binding statements about the suitability of our products for a particular customer application. It is incumbent on the customer to check and decide whether a product is suitable for use in a particular application. This publication is only a brief product survey which may be changed from time to time. Our products are described in detail in our data sheets. The *Important notes* ([www.epcos.com/ImportantNotes](http://www.epcos.com/ImportantNotes)) and the product-specific *Cautions and warnings* must be observed. All relevant information is available through our sales offices.
